

Need real good virtualization answers—real fast?

Leveraging its proprietary Compass methodology and the knowledge gained during thousands of diverse deployments, Paranet Solutions creates efficient, reliable, secure and modern IT operating environments that deliver bottom-line business results. Virtualization is a prime example of how we help.

What are the advantages? How fast should you move? Which applications can you virtualize? How can you phase in virtualization over time? We'll make sure you get good answers, fast—along with a road map for concrete next steps.

No wasted time or money.

Whether you're just starting to investigate the benefits of virtualization or want to accelerate an implementation, our certified professionals will work with you as closely as you need—and then hand you the keys when you're ready. From on-site proof-of-concept to configuration and knowledge transfers regarding managing a virtualized environment, we're ready. We're also ready to make sure you understand the specific areas that will need attention, including application and hardware specification and provisioning; virtual infrastructure-specific skills including technical and operational functions; datacenter issues such as cooling and layout; industry standard server hardware design; shared storage guidelines; backup and recovery options, and process integration such as IT chargeback.

We'll help with:

- > Virtualization assessments, including expected ROI, TCO and modeled scenarios
- > Physical-to-virtual migrations (containment and consolidation)
- > Deployment
- > Business continuity
- > Disaster recovery
- > Desktop strategies, including mapping users to virtual desktops, tracking usage, scheduling sessions, and provisioning from templates

About Paranet

A trusted advisor to Fortune 1000 companies across North America since 1991, Paranet offers expertise in virtualization and storage management; server optimization and consolidation; security and risk management; data center design, consolidation and relocation; unified communication; application services; virtual CSO services and on-demand staffing. If your organization needs to get the most out of previous investments while efficiently migrating to new, business-enhancing technologies, contact Paranet today.
